}
```

Usage

First, clone this repository:

```
git clone https://github.com/AFAgarap/gru-svm.git/
```

Then, install the required libraries:

`sudo pip install -r requirements.txt`

The following are the parameters for the module (`gru_svm_main.py`) implementing the GRU-SVM class found in `gru-svm/models/gru_svm/gru_svm.py`:

```
usage: gru_svm_main.py [-h] -o OPERATION [-t TRAIN_DATASET] -v
                        VALIDATION_DATASET -c CHECKPOINT_PATH [-l LOG_PATH]
                        [-m MODEL_NAME] -r RESULT_PATH
```

GRU+SVM for Intrusion Detection

optional arguments:

`-h, --help` show this help message and exit

Arguments:

`-o OPERATION, --operation OPERATION`

the operation to perform: "train" or "test"

`-t TRAIN_DATASET, --train_dataset TRAIN_DATASET`

the NumPy array training dataset (*.npy) to be used

`-v VALIDATION_DATASET, --validation_dataset VALIDATION_DATASET`

the NumPy array validation dataset (*.npy) to be used

`-c CHECKPOINT_PATH, --checkpoint_path CHECKPOINT_PATH`

path where to save the trained model

`-l LOG_PATH, --log_path LOG_PATH`

path where to save the TensorBoard logs

`-m MODEL_NAME, --model_name MODEL_NAME`

filename for the trained model

`-r RESULT_PATH, --result_path RESULT_PATH`

path where to save the actual and predicted labels

Then, use the sample data in `gru-svm/dataset/train/train_data.npy` for training the proposed GRU-SVM:

```
cd gru-svm
```

```
python3 gru_svm_main.py --operation "train" \  
--train_dataset dataset/train/train_data.npy \  
--validation_dataset dataset/test/test_data.npy \  
--checkpoint_path models/checkpoint/gru_svm \  
--model_name gru_svm.ckpt \  
--log_path models/logs/gru_svm \  
--result_path results/gru_svm
```

After training, the model can be used as follows:

```
python3 gru_svm_main.py --operation "test" \  
--validation_dataset dataset/test/test_data.npy \  
--checkpoint_path models/checkpoint/gru_svm \  
--result_path results/gru_svm
```

Or simply use the prepared script files:

```
# Makes the script files executable
```

```
sudo chmod +x setup.sh
```

```
sudo chmod +x run.sh
```

```
# Installs the pre-requisite software and libraries
```

```
./setup.sh
```

```
# Runs the GRU-SVM for intrusion detection
```

```
./run.sh
```

Results

The results of the study may be found in gru-svm/results.
